

# EKLA Rapid Fentanyl Urine Test

*Saving Lives with Every Test*

The fentanyl crisis has become a global public health emergency. Identifying fentanyl exposure quickly can be difficult in high-pressure environments like emergency departments, first responder settings, and harm reduction clinics.

**The EKLA Fentanyl Rapid Urine Test is a powerful, point-of-care solution for the quick and qualitative detection of fentanyl in urine.**

With a cut-off concentration of **1.0 ng/mL**, it provides **fast and reliable results** to help *guide critical decisions* in healthcare, law enforcement, and harm reduction settings.

## Features:

- **CLIA Waived** - Suitable for both laboratory and point-of-care use.
- **Fast Results** - Clear results in just 5 minutes.
- **High Accuracy** - 95.1% accuracy based on LC-MS validation.
- **User-Friendly Design** - Each pouch contains a disposable pipette and a test kit for convenient testing
- **User-Friendly** - Simple, point-of-care test requiring no specialized training or equipment.
- **Compact & Portable** – Can be stored in any small area and used on any flat surface or counter.
- **Wide Application** - Ideal for use by first responders, emergency departments, clinics, and law enforcement.
